

Solution Sheet

Role Life Cycle Management

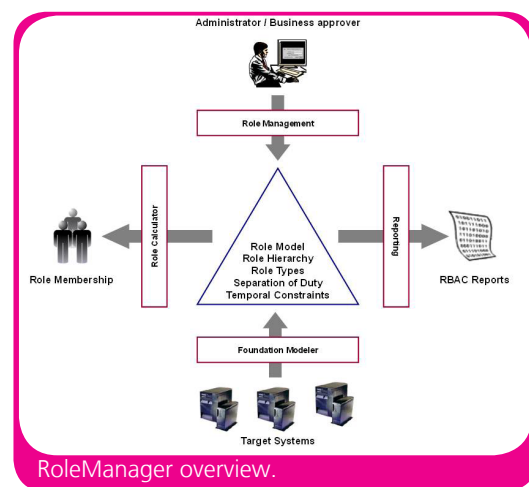

As CIO you are responsible in your organisation for the safety of the IT environment and you need to deal with increasing Security Compliance requirements. At the same time you need to decrease the administration costs of Users and Access Management. Doing more with less!

A difficult objective which needs an innovative solution. SecurIT has developed such an innovative solution for you. RoleManager™ is the answer to your needs!

About RoleManager

In combination with IBM Tivoli Identity Manager, RoleManager allows business people to take responsibility in managing Security by letting them assign users to meaningful business roles. A hierarchical meshed RBAC role model with inheritance can be accommodated, as well as Segregation of Duties, as defined by the ANSI/NIST standard.

- Full delegated administration on Role Management.
- Streamline Business Processes by defining your own role-types
- Temporal constraints on role assignments.
- In addition to RBAC compliance, RoleManager provides significant added-value to ease the daily Management of Roles:
- Support for Role Owners and Role Assignment Approvers.
- Automated discovery and creation of Role Model foundation
- SOA architecture for seamless integration into the Enterprise environment.

By using RoleManager you can reach your goal: **doing more with less!**

The Benefits of RoleManager

RoleManager's seamless integration with ITIM 5.0 provides a unique solution with significant advantages over any other solution in the market.

- A cost-effective and Business-oriented approach for managing User Entitlements;
- Handle Compliance efficiently and manage conflicts of interest;
- Apply a Policy-driven delegation model, closely linked to the organizational structure and/or Business requirements;
- Allow users to move smoothly to other responsibilities via temporary role assignments, including fading out from previously assigned roles;
- Retrieve existing authorization groups from target systems as a step stone to build your Enterprise Authorisation Model;
- Seamless integration of Identity and Access Management into the Enterprise Information Infrastructure;

"RoleManager's tight integration with Tivoli Identity Manager enabled us to implement our own RBAC model and requirements quickly and turned out to be an important facilitator in achieving our Compliance goals".

Robeco, The Netherlands

RoleManager runs on WebSphere Application Server side by side with ITIM and integrates seamlessly with ITIM.
